

## Ace 26T1 Auto Scrubber

The contents of this manual are based on the latest product information available at the time of publication. Pacific reserves the right to make changes or improvements to its machines without notice.

Carefully inspect all components to ensure that there is no concealed freight damage. If such damage is discovered, file a "CONCEALED DAMAGE REPORT" immediately with the delivering carrier.

FOR YOUR CONVENIENCE, RECORD THE FOLLOWING IMPORTANT INFORMATION:

## SAFETY INSTRUCTIONS

- 1) You must have training in the operation of the machine before using it. **READ THE INSTRUCTION BOOK.** If you do not understand any instruction, ask your supervisor.
- 2) Make sure all labels, decals, warnings, cautions and instructions are fastened to the machine.
- 3) Read the labels carefully on the machine. Do not cover them for any reason and replace them if damaged.
- 4) Do not operate this machine unless it is completely assembled and inspect the machine carefully before operation.
- 5) Pay close attention to other people and especially children while operating this machine.
- 6) Be a careful driver and do not strike shelving or scaffolding, especially where there is a danger of falling objects.
- 7) Machines can cause an explosion when operated near flammable materials and vapors. Do not use this machine with or near fuels, grain dust, solvents, thinners, or other flammable materials.
- 8) In case of fire, use a powder extinguisher. Do not use water.
- 9) Do not use this machine as a means of transport.
- 10) Do not use acid solutions that could damage the machine.
- 11) Adjust your speed to the conditions of the floor.
- 12) Do not turn the machine on an incline. Do not stop and leave the machine on a ramp or incline.
- 13) During any maintenance operation disconnect the power supply from the machine.
- 14) Lead acid batteries generate gases that can cause an explosion. Read the instruction manual supplied with the battery charger. Keep sparks and flames away from batteries. **NO SMOKING.** Charge the batteries only in an area with good ventilation.
- 15) Do not use a charger if the power cord is damaged or if charger is not rated for the machine.
- 16) Always wear eye protection and protective clothing when working near batteries. Remove all jewelry. Do not put tools or other metal across the battery terminals, or on the top of the batteries.
- 17) Maintenance and repairs must be performed by authorized Service Centers only.
- 18) Keep the electrical parts of the machine dry. Do not wash the machine with direct water jets or high pressure, or with corrosive material. For storage, keep the machine in a dry location.
- 19) Water solutions or cleaning materials used with this type of machine can leave wet areas on the floor surface. These areas can cause a dangerous condition for the operator or other persons. Always put **CAUTION** signs near the area you are cleaning.
- 20) Do not reach under shrouds with fingers, hands, or toes when machine is running.

# SYMBOLS USED ON THE AUTOMATIC SCRUBBER

	<p>Water Valve Indicator</p>
	<p>Brush Drive Motor Control Switch</p>
	<p>Vacuum Motor Control Switch</p>
	<p>Battery Charge Indicator</p>
	<p>Main Machine Power Key Switch</p>
	<p>Forward – Reverse Traction Drive Switch</p>
	<p>Traction Drive Speed Control</p>
	<p>Squeegee Lift Control Lever</p>
	<p>Solution Flow Rate Adjusting Lever</p>

# MACHINE PREPARATION

## 1) UNPACKING THE MACHINE

- a) Take off the outer packaging.
- b) The machine is fastened to the pallet with wooden wedges that block the wheels. Remove tie down straps.
- c) Disconnect traction motor black lead wire located near the vacuum motor support.
- d) Using a ramp, pull the machine off the pallet.
- e) Reconnect traction motor black lead wire.

Remove

Disconnect  
Black Lead  
Wire

## 2) BATTERY INSTALLATION

- a) Remove the squeegee hose from the recovery tank.
- b) Remove the vacuum cover by rotating it counterclockwise.
- c) Remove recovery tank by lifting tank by lift chain at the back of the tank and the drain hose at the front of the tank.

Remove

Lift Chain

Drain Hose Lift Point

# MACHINE PREPARATION

## BATTERY INSTALLATION (Cont.)

- d) Place the batteries in the battery compartment.
- e) Connect the battery connector to the machine connector
- f) Replace the recovery tank and reassemble the vacuum cover and squeegee hose.

Machine Connector

Battery Connector

## 3) BATTERY CHARGE LEVEL INDICATOR

The battery indicator is digital with 4 display levels and a flashing one. The numbers, which appear on the display, show the approximate charge level. 4 represents a full charge and 0 represents discharged and the batteries must be recharged.

**NOTE:** The brush motor automatically switches off after the battery indicator light begins to flash. You will be able run the vacuum motor and finish drying any wet areas.

Battery Charge Indicator

## MACHINE PREPARATION

### 4) SQUEEGEE ASSEMBLY INSTALLATION

The squeegee is assembled to the machine by lifting the locking latches and sliding the squeegee assembly onto the 2 posts at the rear of the squeegee swing arm. Push on the locking latches down. Lower the squeegee and install vacuum hose over vacuum outlet on squeegee assembly. The hose should be located to the rear of the lifting cable.

Vacuum  
Outlet

Locking Latches

### 5) ADJUSTING SQUEEGEE HEIGHT

The height from floor to squeegee should be adjusted based on blade wear. Rotate the adjusting knobs counter-clockwise to lower squeegee and clockwise to lift it.

**NOTE:** Rotate the right and left adjusting knobs until the squeegee is positioned parallel to the floor.

Height  
Adjusting  
Knobs

### 6) ADJUSTING SQUEEGEE INCLINATION

During operation the rear squeegee blade is most efficient when bent backwards roughly  $3/16^{\text{th}}$  to  $5/16^{\text{th}}$  of an inch along its entire length. To increase the blade bending in the center of the squeegee, tilt the squeegee body backward by turning the adjuster knob counter-clockwise. Conversely, turn the adjuster knob clockwise to increase the bending at the outside edges of squeegee blade.

Inclination  
Adjusting  
Knob

# MACHINE PREPARATION

## 7) RECOVERY TANK

Open the lid and confirm the following connections are secure:

- a) The vacuum cover is securely attached. Align the notches and rotate the cover clockwise to close. The vacuum hose must also be attached.
- b) Confirm that the squeegee hose is properly connected.
- c) Confirm that the drain hose plug, which is located at the front of the machine, is closed.

Vacuum Cover

Squeegee Hose

## 8) SOLUTION WATER

Fill the solution tank with clean water at a temperature not higher than 50°C / 122°F. Add the proper concentration of liquid detergent by following the manufacturer instructions. Excess foam in the recovery tank can damage the vacuum motor, so use only the minimum amount of detergent necessary. Reassemble the cover.

**WARNING!** Always use low foaming detergent. Adding antifoam liquid into the recovery tank before cleaning will also help prevent foaming.

**NEVER USE ACID, BLEACH or AMMONIA**

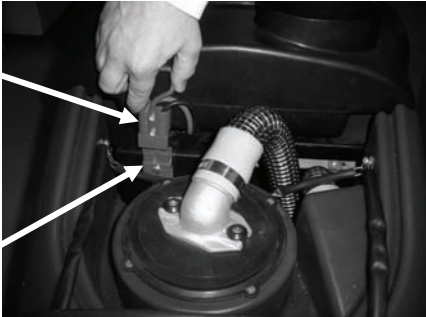

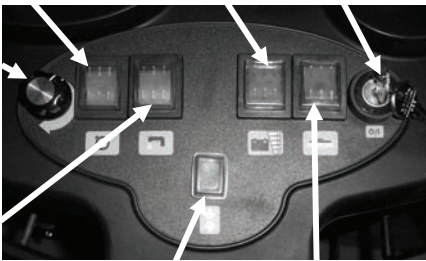

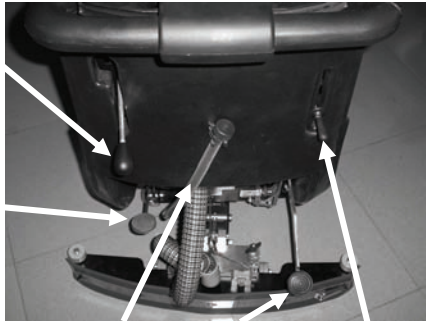

Solution Tank Fill Opening

## 9) BRUSH INSTALLATION

- a) Lift the brush base by depressing the foot level at the rear of the machine.
- b) Place the brushes under the base. Align the brush lugs with the holes in the brush plate. Insert the brushes into the plate and turn each brush so the lugs are pushed toward their retaining springs, until locked. The photo shows the directions to rotate the brushes to lock them into operating position.

# MACHINE OPERATION

<p>1) Connect machine connector to the battery connector.</p>	 <p>Machine Connector</p> <p>Battery Connector</p>
<p>2) Turn on the main power key switch. Battery charge indicator will illuminate indicating the charge level of the batteries. If the indicator is flashing the batteries need to be charged.</p> <p>3) Turn on the brush motor switch. Please note that the scrubbing brush will not rotate until the hand switch lever is engaged.</p> <p>4) Turn on the water solenoid valve switch.</p> <p>5) Turn on the vacuum motor switch.</p>	 <p>Vacuum Motor Switch</p> <p>Battery Charge Indicator</p> <p>Main Power Key Switch</p> <p>Traction Drive Speed Control</p> <p>Water Solenoid Switch</p> <p>Traction Directional Switch</p> <p>Brush Motor Switch</p>
<p>6) Adjust the flow rate of the cleaning solution with lever. Moving the solution flow control lever downward increase the flow rate and raising the lever decreases the flow rate. There should be enough solution to wet the floor uniformly, but not so much that the water gets past the splash guard. Remember that the correct solution quantity depends on the type of floor, the dirt level and the scrubbing speed.</p> <p>7) Release parking brake by raising parking brake lever.</p> <p>8) Release and raise the brush base lift lever to lower the brush base.</p> <p>9) Lower the squeegee using the squeegee lift lever.</p>	 <p>Squeegee Lift Lever</p> <p>Parking Brake Lever</p> <p>Solution Tank Drain Hose</p> <p>Brush Base Lift Lever</p> <p>Solution Flow Control Lever</p>

# MACHINE OPERATION

## 10) MACHINE MOTION

This machine is equipped with traction wheel propulsion. To move machine forward, rock traction directional switch forward and depress the handle switch lever. Adjust the forward speed with the traction drive speed control knob. During the first few yards of operation, check that the quantity of the cleaning solution is sufficient to wet the floor and that the squeegee dries the floor surface. To move machine in reverse, lift the squeegee assembly with the squeegee lift lever and rock traction directional switch rearward and depress the handle switch lever.

 **WARNING!** Always lift the squeegee when moving backwards.

## 11) SCRUBBING

Depress the handle switch lever. The scrub brush will begin to rotate and solution will begin to flow. During the first few yards of operation, check that the quantity of the cleaning solution is sufficient to wet the floor and that the squeegee dries the floor surface.

 **WARNING!** Always lift the squeegee when moving backwards.

## 12) OVER FILL PROTECTION

The machine is equipped with a float that stops the vacuum exhaust air flow when the recovery tank is full. Vacuum motor does not stop operating but the vacuum exhaust air flow rate is greatly reduced. When this occurs, empty the recovery tank by removing the drain plug on the drain hose and then empty the recovery tank.

 **WARNING!** Use gloves for protection from contact with dangerous solutions.

## UPON COMPLETION OF MACHINE USE

After finishing your work and before any type of maintenance is done, it is necessary to do the following:

- 1) Close the water valve by raising the solution flow control lever.
- 2) Raise the brush base by stepping down locking the brush base lift lever. To lock the lever move your foot to the right while the lever is pressed down.
- 3) Lock parking brake by stepping down on parking brake lever. To lock the lever move your foot to the right while the lever is pressed down.
- 4) Lift the squeegee by raising the squeegee lift lever and locking it by moving the lever to the left.

**WARNING!** The squeegee blades can be damaged if the squeegee is not raised during storage or transport.

Squeegee Lift Lever  
Parking Brake Lever

Solution Tank Drain Hose  
Brush Base Lift Lever  
Solution Flow Control Lever

- 5) Switch off main power key switch.
- 6) Switch off the water solenoid valve switch.
- 7) Switch off the brush motor switch.
- 8) Switch off the vacuum motor switch.
- 9) Transport the machine to the location where the recovery tank should be emptied.

Vacuum Motor Switch  
Battery Charge Indicator  
Main Power Key Switch  
Traction Drive Speed Control  
Water Solenoid Switch  
Traction Directional Switch  
Brush Motor Switch

- 10) Remove the drain hose at the front of the recovery tank.
- 11) Remove the drain plug and empty the recovery tank.

**WARNING!** Use gloves for protection from contact with dangerous solutions.

- 12) Remove the brush or pad driver and clean them with clear water.

Drain Plug

## DAILY MACHINE MAINTENANCE

### CLEANING THE RECOVERY TANK

- 1) Empty the recovery tank by removing the drain plug from the drain hose.

**WARNING:** Use gloves for protection from contact with dangerous solution.

Drain Plug

- 2) Lift the cover of the recovery tank.
- 3) Take off the vacuum cover by rotating it counter clockwise.
- 4) Remove the filter and its housing.
- 5) Rinse the tank with clean water.

Vacuum Cover

Squeegee Hose

### CLEANING THE VACUUM FILTER

- 6) Lift the cover.
- 7) Take off the vacuum cover by rotating it counter clockwise.
- 8) Remove the filter and its housing.
- 9) Use clear water to clean the walls and the bottom of the filter.
- 10) Remove the filter and its housing.
- 11) Wash all components thoroughly.
- 12) Reassemble repeating the above operations in reverse.

## DAILY MACHINE MAINTENANCE

### CLEANING THE SQUEEGEE

To obtain the best drying results, keep the squeegee clean. To clean the squeegee it is necessary to:

- 13) Remove the vacuum hose from the squeegee.
- 14) Lift locking latches. Remove the squeegee assembly by pulling rearward.
- 15) Clean the inside of the squeegee thoroughly.
- 16) Clean the squeegee blades thoroughly.
- 17) Reassemble.

Vacuum  
Outlet

Locking Latches

### REPLACING THE SQUEEGEE BLADES

Check the squeegee blades for wear and if necessary, change them. To replace the squeegee blades:

- 18) Remove the squeegee vacuum hose from its port.
- 19) Lift locking latches and pull squeegee assembly rearward.
- 20) Release the band clamps by lifting the band clamp latch.
- 21) Remove squeegee blades.
- 22) Rotate or replace the blades. Please note that the squeegee has 4 useable edges so you may be able to rotate squeegee blades.
- 23) To reassemble the squeegee, repeat the above operations in reverse.

Clamp

## DAILY MACHINE MAINTENANCE

### BRUSH / PAD DRIVER REMOVAL

- 24) Lift the brush base by depressing the foot level at the rear of the machine.
- 25) The photo shows the directions to rotate the brushes to unlock them from the auto scrubber. Clean the brushes with clear water.

## WEEKLY MACHINE MAINTENANCE

### CLEANING THE SQUEEGEE HOSE

To obtain the best drying results, keep the squeegee hose clean. To clean the squeegee hose it is necessary to:

- 1) Take off the vacuum hose from its vacuum port on the squeegee.
- 2) Remove the other end of the vacuum hose from the recovery tank.
- 3) Wash the inner part of the hose with clean water.
- 4) Reassemble.

**WARNING:** Do not wash the hose that goes from the vacuum motor to the vacuum cover.

Do Not Wash Vacuum Cover Hose

Wash Squeegee Hose

### SOLUTION TANK CLEANING

- 5) Remove the fill cap from the solution tank.
- 6) Rinse with clear water.
- 7) Remove the solution tank drain hose and cap at rear of machine and empty the solution tank.

**WARNING:** Use gloves for protection from contact with dangerous solution.

Solution Tank Fill Opening

### IN-LINE FILTER CLEANING

- 8) Drain solution tank.
- 9) Turn off solenoid valve.
- 10) Loosen set screw on in-line filter but do not remove.
- 11) Pull rear hose rearward and separate in-line filter into 2 pieces.
- 12) Remove the filter element and clean with clear water.
- 13) Reassemble.

**WARNING:** Use gloves for protection from contact with dangerous solution.

In-Line Filter

Set Screw

Filter Element

## WATER SOLENOID MAINTENANCE

In the event that the water solenoid begins to leak when turned off debris must be cleared at the valve seat. To gain access the water solenoid the scrub deck must be disassembled from the lifting arms. Remove the 4 bolts shown in the photo to release the scrub deck.

Water  
Solenoid

# TROUBLE SHOOTING GUIDE

## 1) INSUFFICIENT WATER TO THE BRUSHES

- a) Make sure the solution flow control valve is open.
- b) Confirm that there is water in the solution tank.
- c) Make sure solution dispensing tubes are not clogged or obstructed.

Solution  
Flow  
Control  
Lever

## 2) THE MACHINE DOES NOT CLEAN SATISFACTORILY

- a) Check the condition of the brush or pad and replace them if necessary.
- b) The brush should be replaced when the bristles reach a length of 5/8 inches (15mm).

## 3) THE SQUEEGEE DOES NOT DRY THE FLOOR WELL

- a) Check that the squeegee blades are clean.
- b) Adjust the inclination of the squeegee.
- c) Confirm the vacuum hose is correctly fitted into its port in the recovery tank and free from obstructions.
- d) Replace the squeegee blades if worn.
- e) Check that the vacuum motor switch is on.
- f) Check the squeegee height adjustment (see "MACHINE PREPARATION" section).

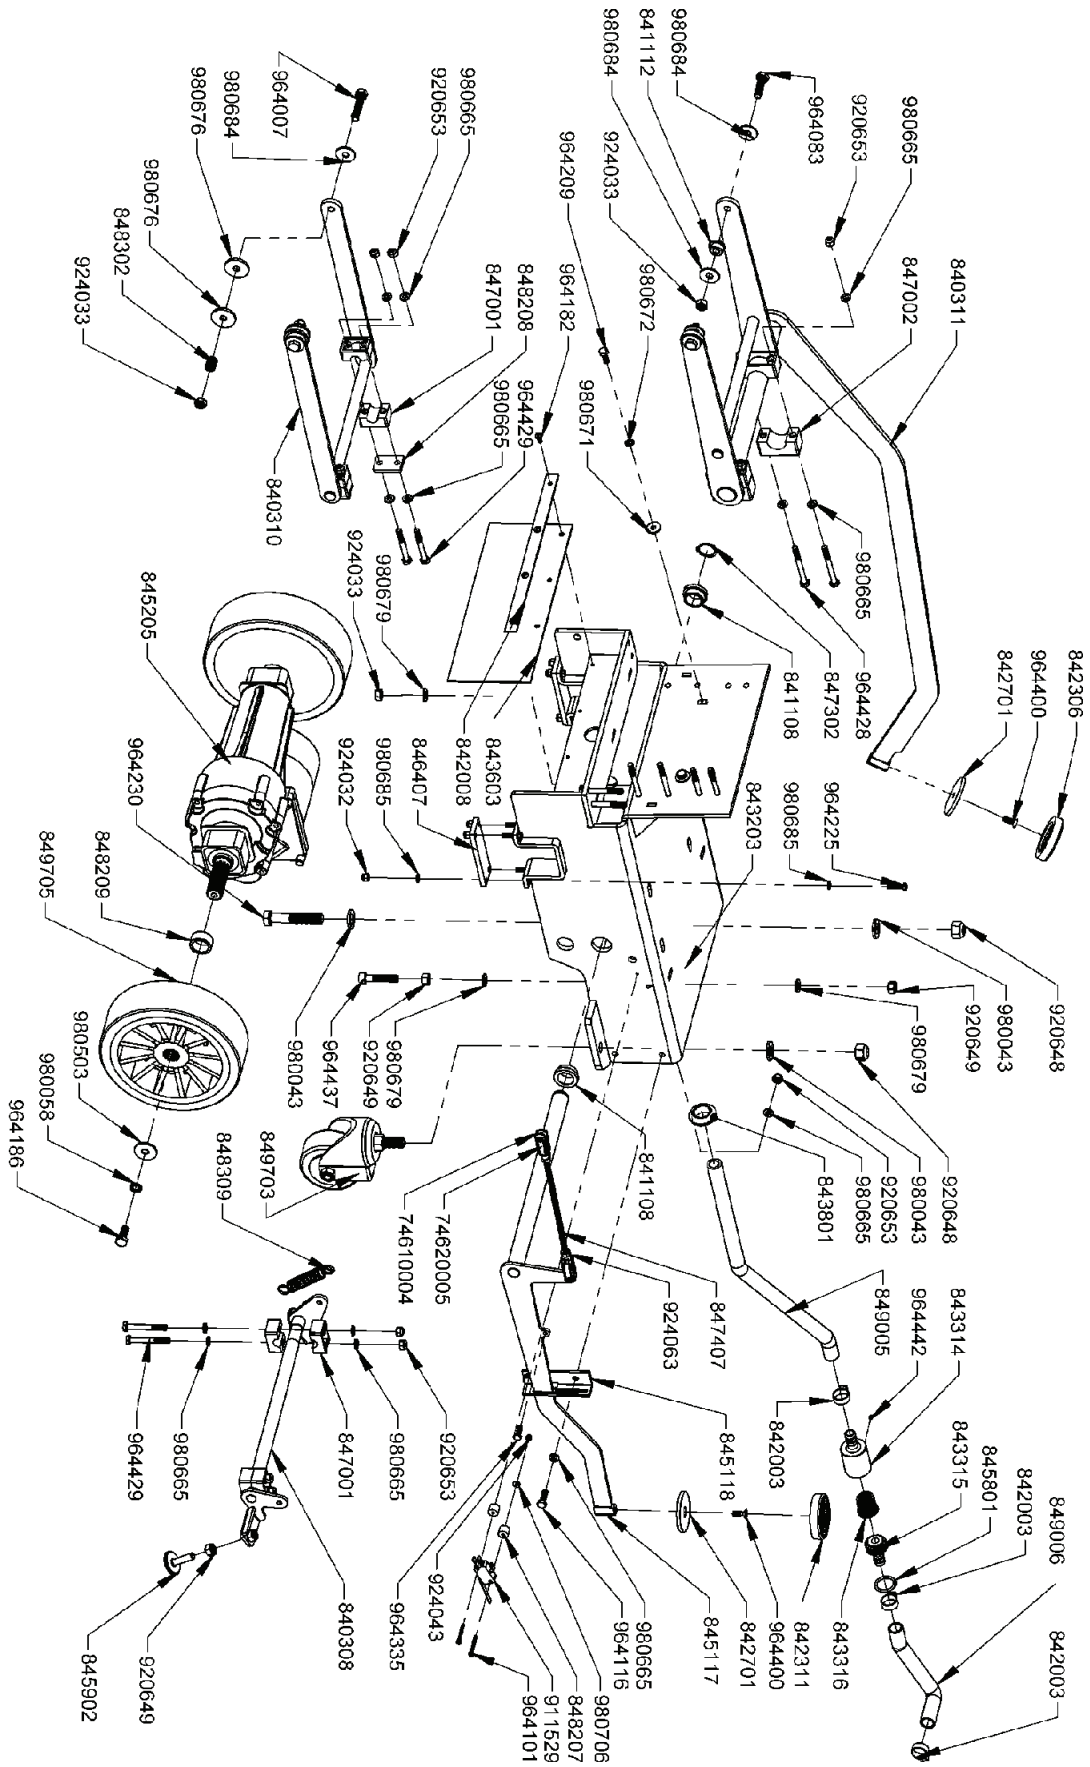

## 4) EXCESSIVE FOAM PRODUCTION

- a) Check that a low foaming detergent has been used. If required, add a small quantity of defoamer liquid to the recovery tank. More foam is generated when a floor is lightly soiled. Use less detergent if this is the case.

## **WARRANTY POLICY**

### **TRIPLE S LIMITED WARRANTY**

The **Triple S Ace 26T1** has been manufactured, tested and inspected in accordance with specific engineering requirements. This machine is **WARRANTED** to be free from defects in workmanship and materials for periods as follows from the date of purchase.

Ten (10) Years Parts, One (1) Year Labor – Polyethylene Components  
Five (5) Years Parts, One (1) Year Labor – Main Frame  
Two (2) Years Parts, One (1) Year Labor – Brush Drive Motors  
One (1) Year Parts & Labor – All other components unless excluded below

Travel time for warranty repair is authorized for a period of ninety (90) days following the date of sale to the end user, with a maximum of three (3) hours per claim.

This warranty extends to the original user/purchaser and only when used, operated and maintained in accordance with **Triple S** Operating and Maintenance instructions.

This warranty does not apply to certain wear parts and accessories of the machine such as electrical cords, carbon motor brushes, floor brushes, belts, hoses, tools, squeegee blades, etc., nor does it apply to damage or failure caused by improper use, abuse or neglect. Warranty credit of return parts including motors, pumps, etc., is subject to incoming inspection of those items.

To secure repair under this warranty, the following procedure should be taken:

1. After the expiration of the ninety (90) day travel time warranty period, the customer is responsible for warranty travel payment for the inoperative machine or warranted parts must be delivered to the authorized dealer with shipping and delivery charges prepaid. If unable to locate the Dealer, you may contact **Triple S** at the address listed herein for the location of the nearest **Triple S** repair center or agent or for other instructions pertaining to your warranty difficulty.
2. Upon compliance with the above warranty procedure, all warranted repairs will be completed at no additional charge or cost to the user.
3. Only **Triple S** or its authorized dealers and agents may make no charge warranty repairs on this product. All others do so at their own risk.

This warranty limits **Triple S** liability to the repair of the product and/or warranted parts replacement and does not include incidental or consequential damages arising from the use of a **Triple S** machine whether defective or not.

#### **BATTERY WARRANTY**

In addition to the terms above, any original equipment **Triple S** battery which becomes unserviceable under normal use within a period of ninety (90) days from the date of sale to the original user will be repaired or replaced with one of equal specification at our option, F.O.B. any authorized **Triple S** sales or service branch, with no charge to user, except transportation costs. After the expiration of the above ninety (90) day period, any battery which fails under normal use will be adjusted to the original user with a new battery of equal specification on a twelve (12) month pro rata basis from the date of purchase. Adjustments will be determined using the then current list price, plus transportation costs. Warranty is rendered null and void if battery is not kept filled to the proper level with **DISTILLED WATER**.

This warranty is in lieu of all other expressed or implied warranties and is extended to the original purchaser/user.
